

SPACE AND ENVIRONMENTAL POLICY

Soresma is strong in planning, organisation and management

As a consultancy firm, Soresma has an extensive experience in planning, organisation and management. Thus we can offer high-quality services in a broad work area. Soresma is active as a designer and adviser for private clients, municipal and provincial government and regional agencies. Within the "Space and Environmental Policy" department, several teams are actively involved in project and policy preparation, including its implementation. Appropriate solutions are developed for activities in urban and surrounding areas concerning spatial planning and mobility, nature and landscape, recreation and sport and finally establishment and management of public space. Soresma is your partner in creating and maintaining sustainable home, living and work surroundings and protecting open space, nature and landscape.

Unity in structure

After examining bottlenecks and values, we developed a coherent vision for a better environment and a vigorous policy, always in close cooperation with the client. A clear vision coupled with a strong spatial concept is further deepened in dialogue with all people concerned and forms the basis for developing problems and actions. These can be both thematic and sensitising as well as domain-oriented.

Spatial planning and mobility

The drawing up of municipal spatial structure plans (MSSP) is in full stride. Following on from these, numerous spatial implementation plans and demarcation processes have started up. Soresma is the designer of several MSSP's, both for rural municipalities and urban centres; projects have also been developed for provinces and for the Flemish region. For these, structure plans are drawn up at several scale levels. For more than 50 municipalities, special construction plans and space implementation plans have been drawn up from various lines of approach. Through these activities, Soresma has reinforced its market position in spatial planning. At mobility level, apart drawing up municipal mobility plans, Soresma also works on vision studies, mobility impact reports, company transport plans and derivatives of agreements (e.g. school surroundings).

Public space and landscape design

The market for public space organisation projects requires projects of ever-increasing quality, whereby facets such as safety, accessibility, sustainability.... are taken into account.

Soresma creates design and implementation files for recreational areas, road infrastructure, public space such as streets, squares and parks, construction surrounding housing projects etc.

In the field of sport and recreation, feasibility and needs studies as well as concrete design plans and technical implementation files are created for sport fields, playing fields and other recreational facilities.

Nature and environmental policy

In the field of space policy, our ecologists, bio-engineers, landscape experts and spatial planners are top consultants of the Flemish community and the Flemish Land Agency. Besides policy-supporting tasks such as compiling methodology for plans aimed at nature, the focus is especially on assessment files, integrated water management (actualising Sigma plan), land consolidation and country institution projects, REE inventory, ecological management plans, etc.

Strategic choice

There are a great many research offices on the market, and it is sometimes difficult for a client to choose. Quotations can vary greatly. Complex situations often make it clear that efficiency is necessary. Soresma works efficiently. We are a multidisciplinary study office and offer you a total package of vision, design, guidance in implementation and management. If you want high-quality service and a practical approach and if you want all of this at very competitive prices, Soresma is your trump card.
