

SAFETY

Soresma supports companies and governments in the areas of internal and external safety.

As adviser to the internal prevention adviser

Support for the internal department for prevention and protection at work implies a complete package of possibilities in practice. Consequently, Soresma can provide:

- Implementation of examinations at the level of work and fire safety coupled with recommendations for improvement.
- Drawing up company emergency plans, zoning plans, explosion safety documents.
- Setting up of safety control systems (such as VCA, OHSAS).
- Giving professional training (HAZOP, hierarchical basic safety line,).
- The implementation of task and risk analyses.
- Conducting process safety analyses or malfunction analyses (HAZOP, FMEA,).
- Drawing up the explosion safety document.
- Drawing up a business continuity plan.

soresma

As safety co-ordinator for construction sites

In accordance with the Royal Decree on temporary and mobile work places, most sites' construction managers must appoint safety co-ordinators. Soresma has experts with the necessary experience to act as safety co-ordinators (at both the design and realisation stages).

The co-ordinator has 4 instruments to carry out his coordination task:

- The health and safety plan, the co-ordination diary, the post-intervention file and the co-ordination structure.
- The health and safety plan describes the work, risk analyses and corresponding preventive measures.
- Events, observations and consequences need to be registered in the co-ordination diary.
- The post-intervention file contains useful information for safety and health during any later construction activities and is transferred to the client at the start of the project.

As a safety partner of SEVESO companies or authorities

Soresma is expert in the compilation of safety reports (SWA-VR; O-VR) and safety studies, as well as the implementation of quantitative risk analyses (QRA). Soresma can call on the wide-ranging experience and expertise of the renowned SAVE bureau from the Netherlands. For the implementation of quantitative risk analyses, the well-known SAVEII software package is used. Soresma has qualified SR experts. Soresma can also help you with drawing up disaster management plans (or auditing them).

Are you interested in Soresma?

Should you need further information on our work domains and expertise in the area of safety, please contact Geert T'Kindt, contract manager of the department of environmental management and safety.

We will gladly provide you with further information on our activities and approach to work in a personal discussion.

Fire-fighting service

Soresma ensures all aspects of fire-fighting service such as:

- Performance analysis of municipal and regional fire brigades, as well as company fire brigades.
- Analysis of fire organisations.
- Feasibility analysis of particular cooperation agreements.
- Analysis of fire-fighting supplies in specific situations (road tunnels etc.).
- Consultancy services with regard to implementation of regulations (such as fire compartmentalisation)

The software "Brandweezorg" (Fire-fighting service), with built-in GIS functionality, is an excellent tool to calculate financing schemes for fire brigades.
